

Your Home's Brahmasthan

found and explained

The centre of your I-shape home, worked out from the measurements you entered, with a plain-language guide to what Vastu says about it.
Prepared for **Sample Home (L-shaped house)**

YOUR MAIN RESULT

Your Brahmasthan centre is 17.8 ft from the West wall and 22.4 ft from the South wall.

The Brahmasthan zone around it is about 12.3 ft × 15.4 ft — 189 sq ft, one-ninth of your 1,700 sq ft.

Inside this report

- p2** Your result — diagram, zone and distances to all four walls
- p3** Your 9-zone map — area of each direction and what it suits
- p4** Your shape explained — why the centre sits where it does
- p5** Find it at home in 5 steps, using your own measurements
- p6** Keep & avoid — a calm guide, with honest sources
- p7** Next steps — 30-day checklist, questions and links

How this was worked out

- 1

Your outline
Your home's outline was drawn from the measurements you typed in.
- 2

The true centre
We calculated the area-weighted centre (centroid) of that exact outline.
- 3

The zone
We marked a zone of exactly one-ninth of your floor area around that centre.

Vastu Shastra is traditional guidance about space, light and order. This report explains what the tradition says about your home. It is not a prediction or a guarantee of any result, and it is not structural, legal or medical advice. Questions about your report? Email info@vastuiq.com — we reply within 48 hours.

Your Result

Your exact centre, the true-size Brahmathan zone and the distance to each wall

Dark lines are your walls (from your measurements). The gold box is the Brahmathan zone; the orange dot is the exact centre. Thin orange lines show the distance to the wall straight ahead in each direction.

Distance from the centre to the wall straight ahead

17.8 ft TO THE WEST WALL	22.2 ft TO THE EAST WALL	27.6 ft TO THE NORTH WALL	22.4 ft TO THE SOUTH WALL
-----------------------------	-----------------------------	------------------------------	------------------------------

Measured from the outer lines of your layout, the centre is 17.8 ft from the West edge and 22.4 ft from the South edge (layout 40.0 ft East–West × 50.0 ft North–South).

YOUR BRAHMASTHAN ZONE

About 12.3 ft (East–West) × 15.4 ft (North–South) = 189 sq ft, which is one-ninth of your 1,700 sq ft.

How we drew it: in the traditional 81-square Vastu grid, Brahma holds the central 9 squares — one-ninth of the area. We draw a box with the same proportions as your overall layout, sized to exactly one-ninth of your real floor area, and centred on the true centre. For a plain rectangle this is exactly the middle square of a 3 × 3 grid. For L, T and irregular homes it follows the real balance point of the floor instead of the middle of the outer rectangle.

Your Home's 9-Zone Map

Your layout split into the nine directions of Vastu, using your own shape

Your outer layout (40.0 ft × 50.0 ft) is split into a 3 × 3 grid, each cell about 13.3 ft × 16.7 ft. The area figure is the part of your actual floor inside each cell, so cut corners show as smaller numbers.

ZONE	AREA	BUILT	ELEMENT / DEITY	BEST SUITED FOR
NE North-East Ishanya	0 sq ft	0%	Water · Ishana	Pooja or meditation, study, windows and open space; keep it light and clean
E East Purva	178 sq ft	80%	Sun · Indra, Surya	Living room, main entrance, windows for morning light
SE South-East Agneya	222 sq ft	100%	Fire · Agni	Kitchen, electrical panel, inverter
S South Dakshina	222 sq ft	100%	Yama	Bedrooms, heavier furniture, storage
SW South-West Nairutya	222 sq ft	100%	Earth · Nirriti	Master bedroom, heavy storage, wardrobes
W West Paschima	222 sq ft	100%	Varuna	Dining, children's room, study, overhead water tank
NW North-West Vayavya	222 sq ft	100%	Air · Vayu	Guest room, toilet, store room, parking
N North Uttara	194 sq ft	88%	Kubera, Soma	Living room, entrance, cash cupboard, open space
Centre Brahmasthan	217 sq ft	97%	Space · Brahma	Kept open, light and uncluttered

Zones less than 70% built: North-East (0%). These are your "cut" areas — see page 4 for what they mean.

The "best suited for" column follows commonly used Vastu guidance. Different texts and consultants vary on details, so treat it as a guide, not a rule.

Your Shape Explained

Why your centre sits where it does, and what your shape means in Vastu

WHERE YOUR CENTRE SITS
The middle of your outer layout is 20.0 ft from the West and 25.0 ft from the South. Your true centre is 17.8 ft from the West and 22.4 ft from the South — 3.4 ft towards the South-West.

Why it moves: the true centre is the balance point of your actual floor. Where a corner is missing, there is less floor on that side, so the balance point moves away from the missing part and towards the larger part of the home. That is why we do not simply use the middle of the outer rectangle.

PROPORTIONS
Your layout is 40.0 ft × 50.0 ft, a ratio of about 1 : 1.25. Traditional texts favour square and rectangular plans that are not too long and narrow. A ratio up to about 1 : 2 is generally treated as balanced, and yours is within that.

Your centre in numbers

True centre (balance point)	17.8 ft from W · 22.4 ft from S
Middle of the outer layout	20.0 ft from W · 25.0 ft from S
Shift between the two	3.4 ft → South-West
Brahmasthan zone	12.3 × 15.4 ft = 189 sq ft
Zone inside your walls	100%
Missing from the outer rectangle	300 sq ft

Your shape, read the Vastu way

NORTH-EAST CORNER CUT

The North-East is the corner Vastu most wants complete, light and open. A cut here is the one most consultants mention first. It is very common in flats and does not mean anything bad will happen.

GENTLE OPTIONS

- Keep what remains of the North-East clean, bright and free of heavy furniture
- Use the nearest North-East room for calm uses: prayer, reading, plants
- Avoid a toilet, kitchen or heavy storage in the remaining North-East part
- If you are building or renovating, ask your architect whether the corner can be squared off

From your 9-zone map, these zones are less than 70% built: North-East (0%). That is what the notes above describe.

YOUR MAIN ENTRANCE FACES NORTH

North-facing entrances are among the most popular in Vastu practice, linked with Kubera and opportunity.

Tip: the exact door position (its "pada") matters more than the facing alone. You can check it free at vastuiq.com/pada-calculator/.

Find It at Home in 5 Steps

Use a measuring tape and your own numbers to mark the spot

VastulQ

Vastu • Astrology • Numerology

You will need: a measuring tape (a laser measure is easier), a pencil or masking tape, and a phone compass.

1

Check North

Stand inside with your phone compass and check which wall faces North. This report assumes the walls you entered as North, South, East and West match the real directions.

2

Start at the West wall

Go to the inside face of the wall to the West of the centre. Measure 17.8 ft straight towards the East and make a small mark.

3

Measure from the South wall

From the wall to the South of the centre, measure 22.4 ft straight towards the North. Where this line meets your first line is the centre.

4

Cross-check

From the spot, the wall straight ahead should be about 22.2 ft to the East and 27.6 ft to the North. If both match within a foot, you have the right spot.

5

Mark the zone

Mark a box about 12.3 ft (East–West) × 15.4 ft (North–South) around the spot. This is your Brahmasthan zone (189 sq ft).

Your measuring lines: West and South distances in orange, the zone box in gold.

If inside walls are in the way, measure along a corridor or through a doorway and transfer the marks. Small differences of a foot or so are normal — wall thickness and rounding both add up.

What to look for at the spot

- Is the spot open floor, or is there a wall, pillar, staircase, toilet or heavy cupboard on it?
- Does daylight reach it, or is it the darkest part of the home?
- Is it a walkway that people pass through, or a place where things pile up?
- Is there a beam, water tank or heavy fitting directly above it?
- What is inside the zone box around it — note anything heavy or closed-in.

Write down what you find

At the exact spot

Inside the zone box

Things to move or clear

WHAT THE CLASSICAL TEXTS SAY

Texts such as the Mayamata and the Manasara describe the central squares of the site plan as the seat of Brahma. They ask that this central area is not built upon or obstructed — kept open, which in many traditional homes meant a courtyard.

Our summary of a principle found in several classical texts (paraphrased, not a quotation). Modern consultants extend it to "keep the centre open, light and uncluttered".

Good to keep at the centre

- Open floor space you walk through
- Daylight, or good lighting if there is no window
- A living, family or dining area
- A passage or lobby kept clear
- A small pooja or quiet sitting space
- Light furniture you can move easily

Usually avoided at the centre

- **Toilet or bathroom** — Seen as the least suitable use of the centre. If it is already there, see the fixes below — you do not need to break it.
- **Staircase or lift** — Breaks the open centre. Very common in houses; keep the area under and around it clear.
- **Kitchen or stove** — Fire is placed in the South-East in Vastu, not the centre.
- **Pillar or heavy wall** — Treated as "weight on the centre". Never remove a structural pillar or wall.
- **Heavy storage or clutter** — The easiest one to fix — move it.

WHAT "USUALLY AVOIDED" MEANS

It means Vastu tradition prefers another use for the centre. It does not mean harm will come to you or your family. Many happy homes have one of these at the centre; small practical steps are the usual answer.

POPULAR MODERN REMEDIES (NOT FROM THE CLASSICAL TEXTS)

Many people also use the items below. They come from present-day practice, not from the classical texts, and there is no evidence that they change anything. Use them only if they feel right to you.

- A Brahma yantra or Sri Yantra placed at the centre
- A crystal, copper or brass pyramid at the centre
- A bowl of sea salt in a bathroom, changed weekly
- Vastu strips or metal helixes on a floor or wall

What not to worry about

- In a flat you cannot have an open courtyard — keeping the centre clear and bright is enough.
- A doorway, an inside wall line or a light table at the centre is minor.
- Do not break walls, pillars or plumbing for Vastu. Safety and structure come first.
- Small measuring differences (a foot or so) do not change the guidance.

Your Next Steps

A 30-day plan, answers to common questions, and where to go next

VastuIQ

Vastu • Astrology • Numerology

Your 30-day checklist

Week 1	Mark your centre using page 5. Take a photo of the spot.	[]
Week 2	Clear clutter and heavy items from the zone box (189 sq ft).	[]
Week 3	Improve light at the centre: open curtains, add a lamp.	[]
Week 4	Look at the cut or weak zones on page 3 and apply the gentle options on page 4.	[]

Common questions

My centre is on a wall. Is that bad?

It is minor. Keep both sides of the wall clear and bright. Do not remove walls for Vastu.

I live in a flat. Does this apply?

Yes, it applies to your own flat's outline. You cannot open a courtyard, so the aim is simply an open, light, uncluttered centre.

Is this the same as the plot centre?

No. This report uses the outline you entered. If you entered the plot instead of the house, the centre is the plot's.

What does the ₹249 report add?

You upload your actual floor plan. An AI reads what sits at your centre and which rooms fall in which zone, and you get the 81-pada grid turned to your North.
